Ok, thank you for the update Gary. Let me know if there is any additional information I can provide EPA.  
Regards-

**Subject:** FJ Doyle Transformer Site

Eleanor:

I wanted to let you know that EPA Removal Program is in the process of planning a removal assessment at the FJ Doyle Site and surrounding properties. The assessment is tentatively planned for the week of April 30 – May 4. It will involve sampling FJ Doyle Site, 4 residential properties, Leonard ISD day care, ISD property, and some drainage pathways. Attached is a draft sampling map, additional changes are in the works on this map but it will give you an idea of what we are planning. The proposed sampling will be 5 pt composites (surface, 0-6 in, 6-12 in, 12 -24 in) with analytes PCBs, Metals, and SVOCs.

We have already talked with the Danny Doyle, Superintendent, and City Manager.

As we know from previous sampling, the site, alleyway, and a portion of one of the residential properties need to be cleaned up. This effort is to determine the extent of contamination since 1998 was the last sampling event.

If you have any questions, please give me a call.
